

In writing. I oppose large-scale implementation of BPL technology. It does not appear to be an adequate solution to an ever growing demand for high bandwidth information interchange. I'm certain that such a myopic solution will prove short-lived, but will leave in it's wake chaos and destruction of hf radio communications as we have known it. My particular concern is the impact on emergency HF radio communications for natural disasters where no "modern" technology has proven an adequate replacement. Thank you.
